Project Title: Hearthstone Wiki

Hearthstone is an online collectible card game (CCG) developed by Blizzard Entertainment. There is a variety of gameplay components and visual elements that make Hearthstone engaging, including game modes, card sets, collection, etc. I wish to utilize the opportunity of building a multi-page website to organize and showcase a selection of components across the game. Each page will focus on one component of the game, linked together by a navigation/hamburger menu.

- **Home Page/Introduction** – Introduce the purpose of the page and the overall design and mechanism of the game.
- **Game Modes** – Showcase various ways in which players can do battle and enjoy the game of Hearthstone. Each game mode follows the basic rules of play.
- **Card Sets** – List the major categories into which all collectible cards are divided into.
- **Collection** – Everything collectible in the game including quests, achievements, items, and cosmetics.
- **Community** – New articles, events, and recourses for the players.
- **Sources** – a list of sources, including the Wikipedia page and sources for photography.
